

CSR PORTFOLIO PLATFORM

Proven Learning. Not Just Reported Impact.

A portfolio impact report built from primary assessment evidence — not partner self-reporting. August 2024 — closed; see the September report for the latest.

About this report

Every institute on the Dronalytics platform runs its own native assessments — this report is built directly from that evidence, not from what an implementing partner chooses to report. It reflects funding, enrolment, attendance, and Learning Depth Index data as they stood in August 2024 — the month before the improvements captured in September's report.

The next few pages walk through: portfolio health, how deeply students were actually learning, learner confidence and engagement, where the network stood geographically, and what needed attention that month.

THIS MONTH AT A GLANCE

Institutes live	88
Students reached	13,598
Avg Learning Depth Index	56 → 63
Fund utilisation	60%
Needs Intervention	7%

HOW THIS REPORT IS BUILT

Assess natively

Every institute runs real assessments on the Dronalytics platform — not a partner's self-report.

Compute the Index

Four plain-language lenses roll up into one Learning Depth Index per institute.

Report the evidence

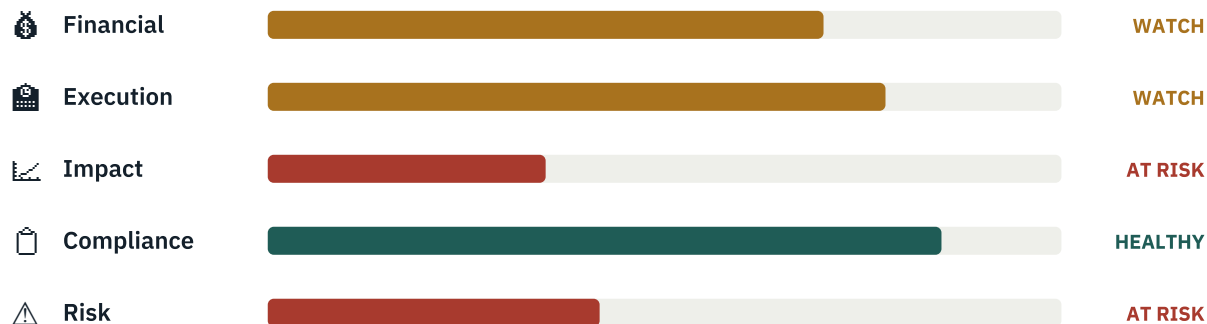

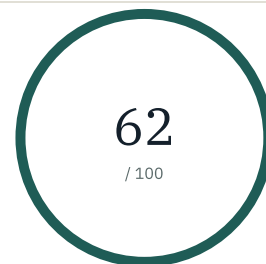

This document is generated straight from that primary data, month over month.

13,598

students reached across 8 states and 18 districts in August 2024 — each one assessed natively on the platform, not counted from a partner's attendance sheet.

Five Signals, One Score

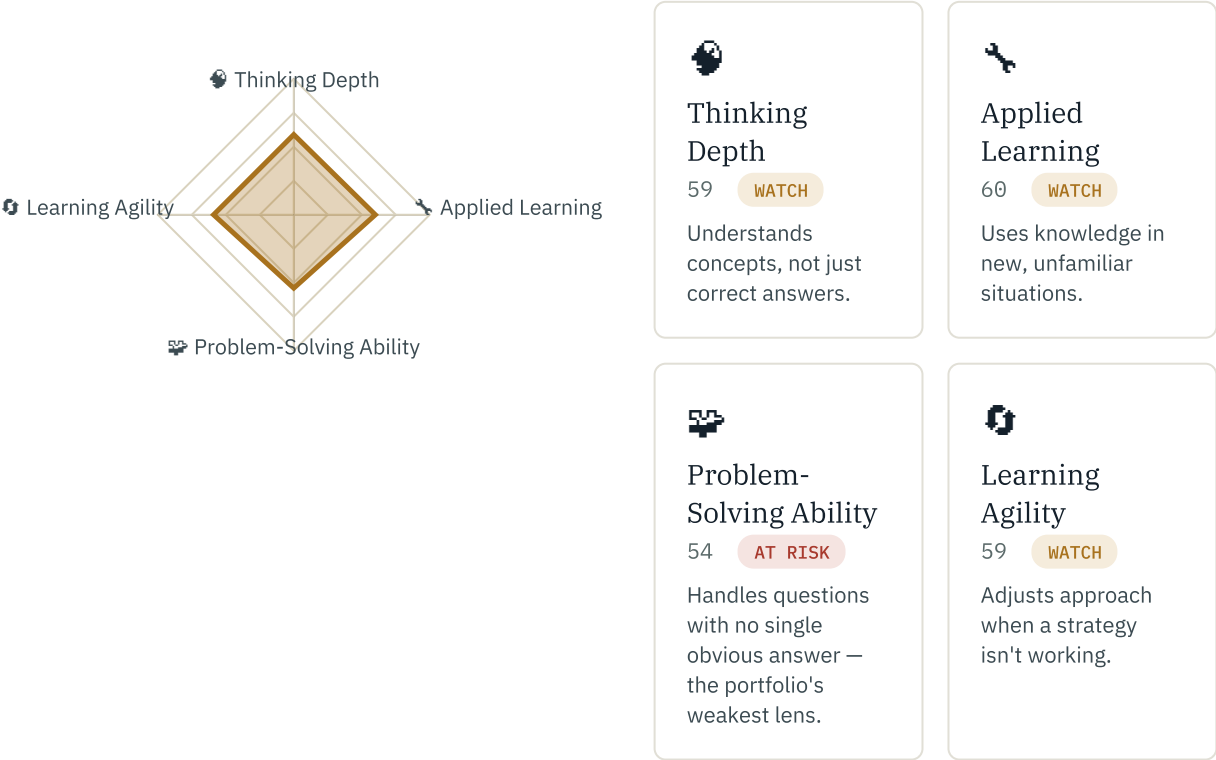

Portfolio health rolls five dimensions into one number: financial pace, how many institutes are executing normally, whether learning is actually improving, compliance paperwork, and risk exposure.

Reading it: Only Compliance was solidly healthy this month — Financial and Execution were both borderline, and Impact and Risk needed direct attention. This is the baseline September's report shows improvement against.

How Deeply Are They Actually Learning?

Learning Depth Index (LDI) stood at 63 this month, up from a baseline of 56 — a gain of 7 points across the portfolio, built from four plain-language lenses, not a single test score.

54 **Problem-Solving Ability** was the weakest lens portfolio-wide, and the primary driver behind the 7% of institutes in the "Needs Intervention" quadrant that month — see page 6.

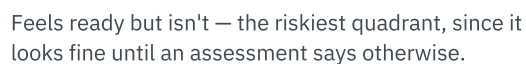

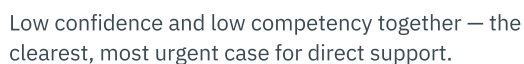

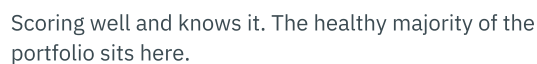

Every institute plotted by how sure learners feel vs. how well they actually scored — this is what tells us which kind of support each institute needs, not just whether it needs support.

⚠ Missed Attempts	18%
⚠ Rushed Decisions	19%
AI Tool Over-Reliance	11%
Needs Intervention	7% of institutes

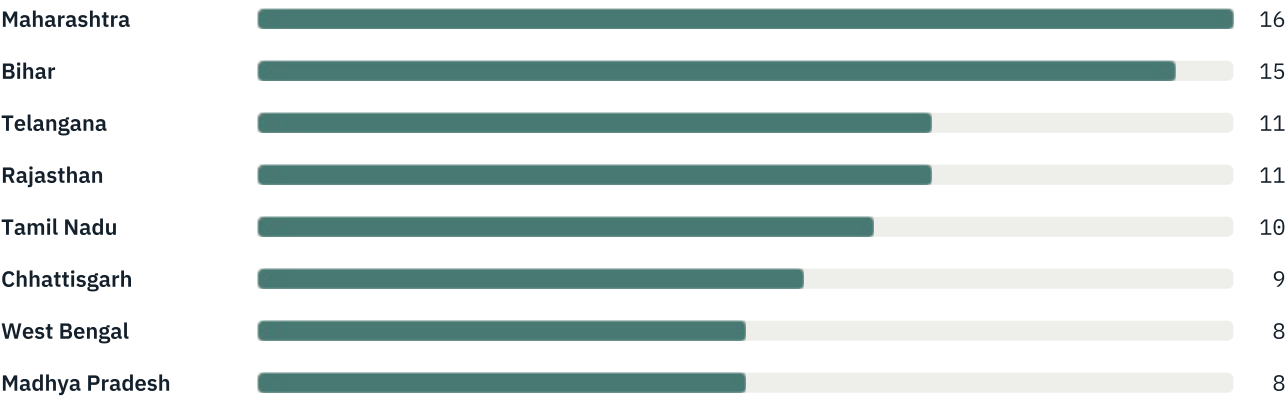

WHAT EACH QUADRANT MEANS

Scoring well, but unsure of it. Usually just needs encouragement, not remediation.

Where We're Funding, and How It's Going

Institute count by state — reach, not performance. The narrative below ties this back to where this month's learning gaps are concentrated.

Nashik (Maharashtra) and Gaya (Bihar) account for more than one of this month's flagged institutes each — both showing the same Problem-Solving Ability gap seen portfolio-wide on page 4, rather than an issue unique to either district.

REACH BY TOWN TIER

Just under half of this month's reach is in smaller Tier 3 towns — exactly the harder-to-reach places a field-visit-based programme would have the most trouble monitoring consistently.

What Needs a Closer Look This Month

The institutes furthest from expectations, in plain terms — not a raw ranking, a specific reason for each.

Little to no improvement

4 institutes

Attendance decline

3 institutes

UC pending (compliance)

7 institutes

Govt Upper Primary School #1, Gaya — Gaya, Bihar
Little to no real improvement in learning since baseline.

Govt Primary School #6, Nashik — Nashik, Maharashtra
Little to no real improvement in learning since baseline.

Municipal School #4, Nandurbar — Nandurbar, Maharashtra
Attendance has slipped to 64% — worth checking in.

Govt Primary School #5, Jalgaon — Jalgaon, Maharashtra
Attendance has slipped to 65% — worth checking in.

✓ **Govt Upper Primary School #1, Nashik** — Nashik, Maharashtra
Recovered since — showing strong improvement by September.

✓ **Municipal School #2, Bhagalpur** — Bhagalpur, Bihar
Recovered since — attendance back above 75% by September.

STATUS

This report is closed. Open items from this period were carried into September's recommended actions — see that report for what happened next.

What Changed By September

Metric	August	September	Change
Institutes live	88	91	+3
Students reached	13,598	14,019	+421
Avg Learning Depth Index	56 → 63	56 → 68	+5 pts
Fund utilisation	60%	67%	+7%
Needs Intervention	7%	4%	-3%

Thank you.

This has been an illustrative sample of Dronalytics' closed monthly reports — August 2024, generated from primary assessment evidence, not partner self-reporting. See the September 2024 report for the current month.
