

CSR PORTFOLIO PLATFORM

Proven Learning. Not Just Reported Impact.

A portfolio impact report built from primary assessment evidence — not partner self-reporting. September 2024, with August 2024 shown for comparison.

About this report

Every institute on the Dronalytics platform runs its own native assessments — this report is built directly from that evidence, not from what an implementing partner chooses to report. It brings together funding, enrolment, attendance, and Learning Depth Index data for September 2024, with August shown alongside so a single month is never read in isolation.

The next few pages walk through: portfolio health, how deeply students are actually learning, learner confidence and engagement, where the network stands geographically, and what specifically needs attention this month.

THIS MONTH AT A GLANCE

Institutes live	91
Students reached	14,019
Avg Learning Depth Index	56 → 68
Fund utilisation	67%
Needs Intervention	4%

HOW THIS REPORT IS BUILT

Assess natively

Every institute runs real assessments on the Dronalytics platform — not a partner's self-report.

Compute the Index

Four plain-language lenses roll up into one Learning Depth Index per institute.

Report the evidence

This document is generated straight from that primary data, month over month.

14,019

students reached across 8 states and 18 districts this month — each one assessed natively on the platform, not counted from a partner's attendance sheet.

Five Signals, One Score

Portfolio health rolls five dimensions into one number: financial pace, how many institutes are executing normally, whether learning is actually improving, compliance paperwork, and risk exposure.

Reading it: Financial, Execution, and Compliance are all healthy — money is moving and institutes are running normally. Impact is the one dimension pulling the score down: not enough institutes are yet showing strong Learning Depth Index gains. The next two pages go straight into why.

How Deeply Are They Actually Learning?

Learning Depth Index (LDI) moved from 56 to 68 this month — a gain of 12 points across the portfolio, built from four plain-language lenses, not a single test score.

Thinking Depth

64 WATCH

Understands
concepts, not just
correct answers.

Applied Learning

65 WATCH

Uses knowledge in new, unfamiliar situations.

Problem-Solving Ability

61 AT RISK

Handles questions with no single obvious answer — the portfolio's weakest lens.

Learning Agility

64 WATCH

Adjusts approach
when a strategy
isn't working.

61

Problem-Solving Ability is the weakest lens portfolio-wide, and the primary driver behind the 4% of institutes currently in the "Needs Intervention" quadrant — see page 6.

Confidence vs Competency

Every institute plotted by how sure learners feel vs. how well they actually scored — this is what tells us which kind of support each institute needs, not just whether it needs support.

Low confidence ← → High confidence

BEHAVIOUR SIGNALS THIS MONTH

⚠ Missed Attempts	15%
⚠ Rushed Decisions	16%
AI Tool Over-Reliance	10%
Needs Intervention	4% of institutes

The 5 institutes in "Needs Intervention" and "Overconfident Risk" show a shared pattern: high Missed Attempts alongside high Rushed Decisions on harder questions — a signature of disengagement, not a content gap.

WHAT EACH QUADRANT MEANS

🏆

Quiet Achievers

Scoring well, but unsure of it. Usually just needs encouragement, not remediation.

✓

Confident & Capable

Scoring well and knows it. The healthy majority of the portfolio sits here.

⚠

Needs Intervention

Low confidence and low competency together — the clearest, most urgent case for direct support.

🏠

Overconfident Risk

Feels ready but isn't — the riskiest quadrant, since it looks fine until an assessment says otherwise.

Where We're Funding, and How It's Going

Institute count by state — reach, not performance. The narrative below ties this back to where this month's learning gaps are concentrated.

Nashik (Maharashtra) and Gaya (Bihar) account for more than one of this month's flagged institutes each — both showing the same Problem-Solving Ability gap seen portfolio-wide on page 4, rather than an issue unique to either district.

REACH BY TOWN TIER

Just under half of this month's reach is in smaller Tier 3 towns — exactly the harder-to-reach places a field-visit-based programme would have the most trouble monitoring consistently.

What Needs a Closer Look This Month

The institutes furthest from expectations, in plain terms — not a raw ranking, a specific reason for each.

Little to no improvement

2 institutes

Attendance decline

2 institutes

UC pending (compliance)

4 institutes

Govt Upper Primary School #1, Gaya — Gaya, Bihar
Little to no real improvement in learning since baseline.

Govt Primary School #6, Nashik — Nashik, Maharashtra
Little to no real improvement in learning since baseline.

Municipal School #4, Nandurbar — Nandurbar, Maharashtra
Attendance has slipped to 64% — worth checking in.

Govt Primary School #5, Jalgaon — Jalgaon, Maharashtra
Attendance has slipped to 65% — worth checking in.

RECOMMENDED ACTIONS

1. Follow up on **4 institutes** with pending utilisation certificates before this year's compliance closeout.
2. Look closer at **Nashik** specifically — it accounts for more than one of this month's flagged institutes, and shares the same Problem-Solving Ability signature.
3. Prioritise a teacher coaching session for the 5 institutes in the Needs Intervention / Overconfident Risk quadrants — institutions with a similar behavioural signature have recovered within one assessment cycle after targeted coaching.

A Month Never Read in Isolation

Metric	August	September	Change
Institutes live	88	91	+3
Students reached	13,598	14,019	+421
Avg Learning Depth Index	56 → 63	56 → 68	+5 pts
Fund utilisation	60%	67%	+7%
Needs Intervention	7%	4%	-3%

Thank you.

This has been an illustrative sample report generated by the Dronalytics CSR Portfolio Platform — built from primary assessment evidence, not partner self-reporting.
